**ABSTRACT OF THE DISCLOSURE**

A shock absorber is comprised of a cylinder defining a chamber ther in,  
the cylinder containing a fluid; a piston rod sealingly projecting into the cylinder  
and being axially displaceable with respect to the cylinder; a piston being  
5 attached to the piston rod, the piston being slidably disposed within the cylinder  
to sealingly divide the cylinder into first and second chambers; means for  
permitting fluid communication between the first and second chambers; the  
means for permitting fluid communication being disposed in at least a portion of  
10 the piston. The fluid is comprised of a polyol ester the polyol component of which  
is a hindered polyol and the carboxylic acid component is a mono-carboxylic acid  
having from about 5 to about 18 carbon atoms.
